

## Brainstorming & Idea Prioritization Template

|                      |                                                       |
|----------------------|-------------------------------------------------------|
| <b>Date</b>          | 27 June 2026                                          |
| <b>Team ID</b>       | SWUID2026217448                                       |
| <b>Project Name</b>  | A Comprehensive Measure of Well-Being - HDI Predictor |
| <b>Maximum Marks</b> | 3 Marks                                               |

### Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

| S.No | Team Member    | Idea / Suggestion                      | Category         | Group No. |
|------|----------------|----------------------------------------|------------------|-----------|
| 1    | Bala Karnayana | Predict HDI score using ML             | Machine Learning | 1         |
| 2    | Bala Karnayana | Build Flask web app for predictions    | Web Development  | 2         |
| 3    | Bala Karnayana | Use Linear Regression model            | ML Algorithm     | 1         |
| 4    | Bala Karnayana | Visualize data with Seaborn/Matplotlib | Visualization    | 3         |
| 5    | Bala Karnayana | Download HDI dataset from Kaggle       | Data Collection  | 1         |
| 6    | Bala Karnayana | Save trained model with Pickle         | Model Saving     | 2         |

### Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

| Group No. | Final Idea                             | Feasibility (High/Medium/Low) | Importance (High/Medium/Low) | Priority | Selected (Yes/No) |
|-----------|----------------------------------------|-------------------------------|------------------------------|----------|-------------------|
| 1         | HDI Prediction using Linear Regression | High                          | High                         | 1st      | Yes               |
| 2         | Flask Web Application for predictions  | High                          | High                         | 2nd      | Yes               |
| 3         | Data Visualization with Seaborn        | Medium                        | High                         | 3rd      | Yes               |
